1. Sample: DOMCreate

1.1. DOMCreate

DOMCreate, illustrates how you can create a DOM tree in memory from scratch. It then
prints the the tree that was just created.

1.1.1. Running DOMCreate

The DOMCreate sample illustrates how you can create a DOM tree in memory from scratch.
To run DOMCreate, enter the following

```perl
perl DOMCreate.pl
```

Here is a sample output from DOMCreate

```xml
<?xml version="1.0" encoding="UTF-8" standalone="no" ?>
